

## Case Study

XYZ is a real estate company, sellers contact them with details of the property they want to sell over the phone. When buyers contact them to purchase the property, the staff of XYZ provides the details of properties provided by sellers. Now XYZ wants to avoid manual interaction over the phone and decided to provide a digital platform for the same. So, they approached ABC Infotech for the same, and in the first phase, XYZ company wanted to digitalize the property registration module. As a senior developer of ABC Infotech, you are asked to develop the class for property registration.
